EXPERIENCE

Lead Software Developer

HellCats

2022 - Present

Here I architected cutting-edge apps in the dynamic Web3 world, from idea all the way to market, as the main developer.

- Soft staking platform which rewards users for holding
- Marketplace where users can spend custom off-chain token
- NFT metadata upgrade, users trigger upgrade of their art & metadata using USDC as payment
- Created system to allow users to reveal individual NFTs
- Twitter welcome bot, helps users tweet & showcase their NFT
- Swap Shop, a system where users can 1:1 send their HellCat & win another one from the pool.

Wordpress Expert

Codeable

06/2021 - Present

As a freelancer at Codeable, I've developed over 400 projects for over 100 customers, generating millions of dollars in revenue for my clients.

Reviews at codeable.io/developers/thomas-toma/

- 4.96/5 overall rating
- 435 projects

Full Stack Developer

Viral Infotech Solutions

09/2017 - Present

- Maintaining and optimizing a diverse portfolio of websites, including those built on CMS platforms like WordPress and custom-developed sites without CMS.
- Develop new website solutions tailored to client requirements, ensuring seamless functionality and user-friendly design.
- Collaborate with cross-functional teams, including designers and back-end developers, to deliver fully integrated web projects.
- Implement SEO best practices and performance optimizations to enhance site speed, accessibility, and overall user experience.
- Troubleshoot and resolve technical issues in both CMS-driven and custom websites, ensuring high availability and reliability.
- Stay updated with industry trends and emerging technologies to continuously improve development processes and deliver innovative solutions.

SUMMARY

I love solving problems in efficient & creative ways, even if it means going the extra mile!

As a Full Stack Web Developer With over 11 years of experience, I have successfully delivered hundreds of websites and have a proven track record of developing scalable web applications serving thousands of users, using various frameworks and programming languages, from initial idea all the way to production.

Passionate about AI and making lives easier via technology.

Happy to adapt, learn & lead!

Web Developer

Increase Media

2020 - 2021

Collaborated with project managers to set coding goals for pre-release software, aligning with business goals while keeping things technically solid.

Notable clients including Jordan Peterson.

- Modernized old codebases to match modern standards, boosting performance and efficiency. A 25% jump in system speed!
- Designed clean, user-friendly interfaces that made project management smoother and more efficient, helping teams get more done with less clutter.
- Built data pipelines to power web tools, ensuring data flowed fast & clean for better analysis.
- Created detailed project plans based on client needs, guiding teams to deliver results on time and within scope.

Junior Web Developer

Black Stone USA, INC

07/2015 - 09/2017

Responsibilities & Achievements As a web developer at Blackstone, I was responsible for developing, maintaining, and updating websites primarily built on WordPress. Over the course of my tenure, I successfully delivered hundreds of custom web pages and dozens of websites, ranging from complex enterprise-level sites to simple, user-friendly solutions. My role involved:

- Website Development & Maintenance: Designing and implementing websites using both pre-existing themes and custom-developed frameworks tailored to client needs.
- Client Collaboration: Conducting regular online consultations with clients to understand their requirements and making necessary updates to ensure satisfaction.
- Database Management: Working with MySQL databases and other backend technologies to power dynamic web experiences.
- Frontend Development: Building responsive, SEO-optimized websites directly from Photoshop documents (PSDs) into custom HTML/CSS. I also utilized frameworks like Bootstrap 3 for front-end development and created plain HTML solutions when frameworks were not required.
- Technical Support & Optimization: Performing website migrations, bug fixing, product integration, and ensuring sites ran smoothly across all devices.
- My work involved transforming static PSD files into fully functional, responsive websites optimized for search engines. I consistently delivered high-quality results, balancing technical expertise with a client-centric approach to meet diverse project requirements.
